## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 112***

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 18 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding claim 18, line 3, applicant should specify what the dielectric strength is "at least."

### ***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-9 and 18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Prostor [US 3,726,005] in view of Japan 358054606.

Prostor discloses a field coil [18] for an electric machine comprising:

- multiple windings [figures 2-3 and 5-6]; and

Art Unit: 2832

- an epoxy powder resin coating [13, abstract] applied to the coil layers.

Prostor disclose the instant claimed invention except for: the powder resin specifically having a dielectric strength of 1000-1500 v/mil.

Japan 358054606 discloses a coating for a coil of an electric machine formed of a silicon powder resin having a high dielectric strength.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to use the coating composition of Japan 358054606 for Prostor, for the purpose of enabling the coil to withstand the operating environment of a field coil.

Regarding claim 2, Prostor discloses the coating [column 2, lines 20-30] being operable in a high temperature environment.

Regarding claim 3, it would have been obvious to one having ordinary skill in the art at the time the invention was made to not coat the end connection portions of the winding in order to provide a good electrical connection.

Regarding claim 8, to add additional coatings would have been obvious for the purpose of improving wear characteristics.

### ***Response to Arguments***

5. Applicant's arguments filed 01-16-02 have been fully considered but they are not persuasive.

Applicant argues:

[1] the "composition" used in Japan '606 is not a coating; and

Art Unit: 2832

[2] the “composition” does not have the required strength and thermal stability;

[3] the properties of Japan ‘606 are not applicable to be used with Prostor.

Examiner disagrees:

Regarding [1]-[3]: Prostor discloses the use of a coating for an electric machine formed of an epoxy resin. Japan discloses a resin having the desired properties used in a coil of an electric machine. A skilled artisan would have been motivated to use the design of Japan ‘606 in the coating of Prostor in order to provide sufficient strength and heat handling capabilities. Both Prostor and Japan ‘606 disclose resins used in an electric machine.

Regarding [2]: Japan discloses the resin being used in a similar operating environment to that of the claimed invention of applicant. Japan’s resin, in order to function, would inherently possess the necessary strength/temperature parameters.

### *Conclusion*

6. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the

Art Unit: 2832

date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
